Cover Letter

Dear Hiring Manager,

I am a passionate and driven Computer Science undergraduate with a strong interest in building impactful, real-world technology solutions. Through my academic journey and hands-on project experience, I have developed a solid foundation in software development, problem-solving, and modern technologies including full-stack development and emerging areas like Artificial Intelligence.

I have worked on several practical projects such as a GenAI-powered grocery management system, a real-time chat application, and a hospital management system. These experiences have helped me understand how to design scalable systems, write clean and efficient code, and approach problems with a solution-oriented mindset. I continuously strive to improve my skills in Data Structures & Algorithms, system design, and modern development practices.

Beyond technical skills, I actively engage in innovation and leadership activities as part of my university's entrepreneurship and innovation cell. These experiences have strengthened my ability to collaborate, communicate ideas effectively, and work in team-driven environments.

I am always eager to learn, adapt, and contribute to meaningful projects that create value. I am particularly interested in opportunities where I can grow as a developer while making a tangible impact through technology.

Thank you for taking the time to review my portfolio. I would welcome the opportunity to connect and discuss how I can contribute to your team.

Best Regards

Rohit Malyadri
